Waterproof technology

HYDROTECT is the technology that makes FINfloor suitable for installation in demanding spaces. It is possible thanks to 3 features:

1. - Our precise click - based system provides air-tight seals that stop liquid seepage.
2. - All our slats are sealed on all 4 edges with paraffin. This product, due to its water-repellent nature, protects the backing board against humidity.
3. - Our careful manufacturing process uses a very dimensionally stable HDF substrate.

Suitable for bathrooms and kitchens

FINfloor is suitable for installation in bathrooms and kitchens. It must be installed in combination with the joint sealant and silicone filler for the remaining space between the floor and the walls. It cannot be applied to bevelled products or commercial installations. Installation instructions may be found in Downloads on the manufacturer's website.

Suitable for underfloor heating

All our laminate floors are suitable for installation in rooms with underfloor heating. Installation instructions may be found in Downloads on the manufacturer's website

PEFC - certified product

All the wood we used to manufacture FINfloor laminate flooring is PEFC- certified. In other words, our raw material comes from forest managed efficiently and with sustainability criteria.

Basic Wood Underlay Green 5mm

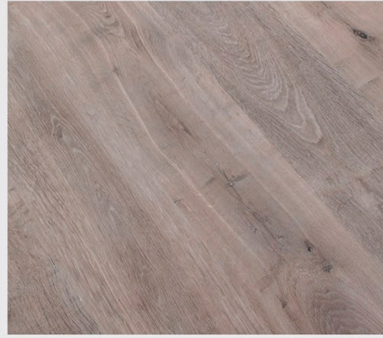

Basic Wood Nature CEZAR is a natural underlay for floors (i.e. laminates, three layer-planks) made in the process of pine-tree fibres milling. It muffles vibrations, levels the base and reduces squeaking sounds of floors. Available thickness is 5 mm. Basic Wood Nature underlay is produced using environmentally friendly technology. It is recommended to use it with Cezar Basic Izopar – the vapour retarder film.
